What specs do i need for my pc

Before buying a pc you need to know for what you are using it.

For basic tasks like writing texts or surfing in the web you only need a pc with 64 up to 128 gigabite storage, 4 gigabite ram and a Intel Celerion or a Amd Fx.

For a workspace i would recommend a pc 256 up to 512 gigabite, 8 gigabite ram and at least a Intel Core i3 or a Amd Ryzen 3.

For gaming you need a pc with a dedicated graphiccard i would recommend at least a Rtx 2050 from Nvidia, at least 1 terrabite storage, 16 gigabite ram and a Intel Core i5 or a Amd Ryzen 5.

For a pc where you want to edit videos or photos then you need at least

a Rtx 2070, at least 1 terrabite storage, 16 gigabite ram and a Intel Core i7 or a Amd Ryzen 7.

Thank you for reading.
